

The new Lösing performance Level

This high quality, fully automated cutting machine from the Robust company, operates with absolute precision resulting in maximum efficiency. Static build up in the foil is eliminated during the entire processing by the machines built-in ionisation.

Cutting Service for Reels and Sheets

The new Lösing performance Level:

Complete processing of foil for use in photovoltaics on the CNC-controlled Robust-High performance-Cutting centre:

Lösing performance Level brings you 30 years of experience in foil cutting and similar products. Combined with our brand new cutting centre we now offer you a completely new dimension for new assignments. Under clinical conditions.

The cutting and depositing of the foil blanks, using a grabber, is fully automated and contactless.

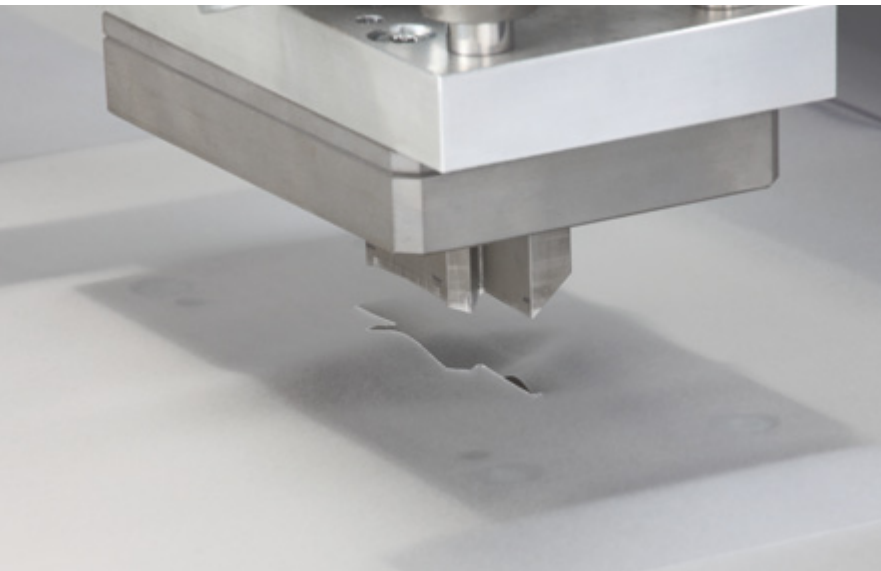

Your foil will receive a smooth, clean, particle free crosscut using the scissor-cutting procedure.

Precision cutting of EVA and backsheet foils for the photovoltaic industry with or without punch holes.

We, of course, also guarantee our already well known high quality even in this highly specialised area. The individual processing of the rollstock virtually results in a 100% quality control of the product. We guarantee an extremely high cutting accuracy up to the maximum format of 1700x3000mm.

The entire process, from production up to the neat and secure packaging in PE-foil, is contactless, entirely without hand contact. Optionally we also offer packaging, for example, in packages of 100.

By using high-precision stamping tools optional cut-outs, for example cable feeds for the backsheet foil, are possible at any location.

All of the necessary parameters for your product can be stored. Therefore, due to the numerous configuration possibilities, the machine can be tailored to meet the specific needs of your product.

Loesing

No encumbrance to the foils surface.

The installed ionisation eliminates static charging. This motorised and electronically regulated process enables and maintains a constant web tension, guaranteeing a particle free, smooth, clean cut with no encumbrance to the foils surface.

Furthermore you know:

We are a flexible professional team offering you short delivery deadlines and speedy processing of your orders. Even after the processing you have complete job control through our "Chargen traceability". Storage of your original merchandise and Just in Time Recall is a possible option. We can guarantee customer protection if desired.

Constant web tension is made possible by the electronic and motor driven unwinding of your original rolls. Minimal production waste is achieved by using the splicing-table in the cutting process.
